

## THE REMAKERS UNVEILS THE FIRST EUROPEAN REMANUFACTURING OFFER DEDICATED TO ELECTRIC VEHICLES AT REMATEC

- The Remakers will attend the Rematec trade show for the first time to showcase the first European remanufacturing solution for electric vehicles.
- The remanufacturing of power electronics is made possible thanks to partnerships with Valeo and Continental, which remanufacture the inverter and the converter respectively.

**Flins, April 1, 2025** – THE REMAKERS announces its first participation at the Rematec trade fair, which will take place in Amsterdam from April 8 to 10. The company will present its full product range, including the first European remanufacturing solution for electric vehicles. This includes the remanufacturing of the electric engine and power electronics, which, alongside the traction battery, are the most expensive components of an electric vehicle.

*“In a continuously growing market, driven in particular by the electrification of the fleet, The Remakers is ahead of the curve in the remanufacturing of electric components. This offer provides repair professionals with an alternative to new parts—at equivalent quality and in average 30% more affordable—making it a compelling option for these high-value components. Moreover, remanufacturing is a solution that consumes fewer natural resources. For example, the industrial process allows the reuse of as much as 99% of the weight of the electric engine,”* says Rafael Treguer, CEO of The Remakers.

The remanufacturing of electric engines began in late 2024, and over one thousand remanufactured electric engines have already been delivered.

Power electronics remanufacturing will begin in the fall. This is the result of a partnership with Valeo and Continental, who co-developed a complete solution that includes inverter remanufacturing by Valeo and converter remanufacturing by Continental. This collaboration enables the rapid market launch of a high-tech product at a more affordable price than new, with equivalent quality.

#### **About THE REMAKERS**

A pioneer in automotive remanufacturing since 1949, THE REMAKERS is a European leader in remanufactured automotive parts, serving all stakeholders in the industry. The company offers a wide product range with more than 11,000 references—mechanical, electronic, and electric—including the first available offer in Europe for electric vehicles, highlighting its commitment to innovation, sustainability, and environmental responsibility. Its offer provides an alternative to original parts, with equivalent quality and competitive pricing, thanks to a proven industrial process and recognized expertise in reverse engineering. Located at the Flins Refactory (France), the company delivers 350,000 parts per year and aims for 50% growth in activity by 2030. The Remakers is a subsidiary of The Future Is NEUTRAL, a 360° circular economy company for the automotive sector.

#### **About The Future Is NEUTRAL**

The Future Is NEUTRAL is the 1<sup>st</sup> 360° circular economy operator serving the entire automotive value chain in Europe. Its offering covers the entire vehicle lifecycle, from the supply of recycled materials and circular economy parts to the responsible collection and treatment of end-of-life vehicles. The Future Is NEUTRAL is industrializing a closed-loop circular economy for the automotive sector.
